PROCESS LMS ™

Feature rich. Streamlined. SCORM compliant.

Dynacor's feature-rich eLearning platform is streamlined for the unique needs of your learning and development program. Friendly, intuitive dashboards provide learners and administrators with easy access to content, management, and reporting features. And, of course, our customized interface aligns with your branding guidelines and reflects your workplace culture.

General Features

Intuitive interface built for simplicity and all levels of computer literacy
Different dashboards for each type of user: admin, supervisor, or learner
Accessible on all devices with responsive design
System is branded with your company logo, colours and given your unique domain name
Checklists, manuals, and third-party certifications can be tracked just like courses
LMS can be integrated with CRM or HRIS software to track learner progress
Learners can email or print certificates directly from the dashboard
A SCORM compliant LMS with capability of uploading any SCORM 1.2 courses
Offer different language versions of the same course. Completions for all versions are tracked as a single course
Set end dates for course completions and certification expiration
Access help content, FAQ, and technical support anytime

PROCESS LMS ™

Learner Features

Learners can self-register and create their own profile

Learner dashboard displays assigned courses, completions, expiry dates, and deadlines

Course progress is saved, and learners can resume where they left off

Learners can edit their own profile and enroll in additional courses from the course catalog

Learners can reset their account password if locked out

Automatic email notifications are sent to learners when their certification is about to expire

Learning profiles based on job position, organizational unit, location, or other categories

Learners can specify company and employee ID during registration

Ability to select employee supervisor during registration

Ability to purchase courses online using PayPal or credit card

Ability to reset course completion and re-certify at any time

Learners can upload first aid certificates, driving abstracts, or any other previous training credentials to create a comprehensive training profile

dynacor

Administrator Features

- Administrator dashboard with aggregated learner and course statistics
- Intuitive reporting interface displays learner and course information
- Powerful search feature to find learners by name, company, employee ID, group, supervisor, course, and date
- Flexible filtering options by certified, inactive, or expired learner status
- Automated reporting feature that can email user reports to selected administrators
- Administrators can bulk-assign courses, learning profiles, and supervisors
- Administrators can add new learners and archive inactive accounts
- Administrators can view learners' complete training record and profile details
- Administrators can edit learner information and assign additional courses or learning profiles
- Create user groups and manage learning profiles based on job position or organizational unit
- Company policies, checklists, and other training documents and be uploaded and assigned as part of a GLO
- Supervisors can be assigned to a group of learners to manage their own workers
- Supervisors receive automatic email notifications of learner certification expiry
- Export and download full learner reports in Microsoft Excel format
- System records and displays the final course grade for each learner
- System records and displays compliance score for each learning profile assigned to a learner
- Bulk learner import, course assignment, and instant certificate creation (e.g. classroom sessions)
- Administrators can group multiple courses into course bundles
- Ability to sell courses and bundles online using PayPal integration
- Flexible expiration period set for each course (e.g. 1 year)
- Multiple levels of administrator accounts, including full-access and read-only permissions
- Included in the package is an administrator training session
